

Multispan, Tunnel and Mini-Greenhouses for Professionals and Hobbyists.

AGRIMEC was founded in 1979, in Casazza, a small village at 70 km from Milan. After 30 years AGRIMEC has built a brand that is renowned throughout Italy in the design and installation of greenhouses for flower and vegetable-growing to suit all sizes and satisfy all demands for both the hobbyists and the professional.

AGRIMEC's greenhouses are built with high-quality European raw materials and with an attention to detail to ensure greater efficiency and easier assembly. In recent years design has focused more on the subject of energy. AGRIMEC's manufacturers its own products using 100% renewable energy. In 2011 Agrimec obtained its first EU patent for a new concept of solar greenhouse, specifically designed for the Central European region. that is able to work continually all year round.

One of the key advantages of AGRIMEC is its installation. Only a specially trained team with the right experience, tools and organization can install a such structure. AGRIMEC employs qualified workers for every kind of installation.

The installation is one of primary importance aspects in the purchase of one greenhouse.

With the adoption of a modular standard solution and high structural resistance, our Greenhouses ensure flexibility applications, long-life, low operating costs and a competitive price.
