

FROM THE IDEA THROUGH TO SERIES PRODUCTION

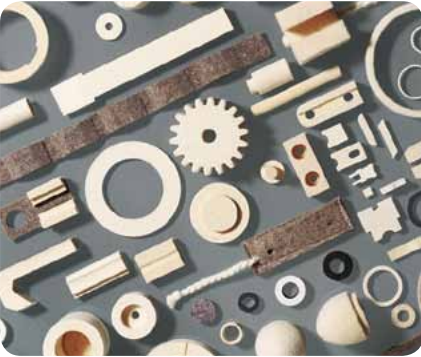

150 YEARS OF TRADITION, INNOVATION AND CUSTOMER FOCUS

Since 1858, VFG has been developing solutions made from felt that are precisely tailored to the requirements of its customers. We combine our skills and our experience with state-of-the-art technology to manufacture the end product – either in series production or as a one-off – in almost any size and shape, made to an exact fit and ready for installation.

The variety of our manufacturing options – in processing, finishing and making up – is just as unique as the properties of felt material and its areas of application. Our specialised range of products serves customers from the most diverse sectors.

This makes VFG a partner you can rely on for your customised systems solutions as well as for a range of ready-made products.

INTELLIGENT FIBRES FOR ALL USES

Under the brand name VFG MULTITEX, we work with our customers to develop individual solutions covering a unique broad spectrum. No matter what you want to insulate, wick, store or dampen, we will identify or create the correct felt for you.

Just like felt itself, there are practically no limits with us when it comes to production, finishing options and making up. With every solution we propose, quality and efficiency are paramount.

QUALITY RUNS THROUGH THE ENTIRE MANUFACTURING PROCESS

With VFG MATPROTEX, exact production standards and the quality of your end product are given the highest priority. Our commercial products and solutions protect materials during production and processing. The particular properties of felt make it suitable for a diverse range of applications, for example:

- » as reliable components in the steel industry, e.g. brake and wiper pads
- » for applying and removing oil in sheet metal production and wire processing
- » as a protective and economical transport solution for hot aluminium profiles up to 650°C

Products from VFG MATPROTEX ensure consistent quality and smooth operating.

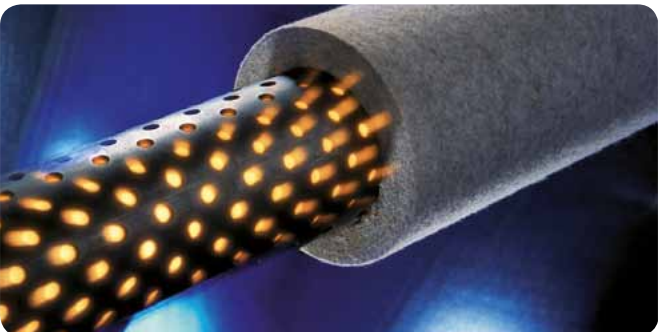

HIGH PERFORMANCE FOR LONG LIFE

Whether it is for power tools, household appliances or engineering: VFG SEALTEX offers protection from dust, moisture or environmental pollution. With our unremitting commitment to the highest quality standards, we ensure long life and consistent performance for your products:

- » as dust filters in drills
- » as seals in domestic and industrial dryers
- » as seals in wind turbines
- » and in many other ways ...

Solutions from VFG SEALTEX are always tailored to individual circumstances and are developed in close cooperation with the customer, from prototype through to series production.

COLLECTIVE QUALITY SIMPLIFIES EVERYTHING

The FFF GROUP is a strong association of companies that share our passion for felt as a raw material. Its versatility is as inexhaustible as its applications and the number of industries in which it can be used.

The FFF GROUP stands for constant pooling of knowledge, for commercial stability and for high quality standards. Our group gathers 450 years of collective experience in more than 80 industries worldwide. Our customers include the electrical, automotive and steel industries, as well as instrument makers and engineering companies, designers and furnishers. Under the brand name lineTEC, we offer solutions for trenchless sewer repairs. VFG Weapon Care No.1 complements our extensive portfolio.

AS A PROUD MEMBER OF THE FFF GROUP, WE MAKE FULL USE OF ITS SYNERGIES FOR THE BENEFIT OF OUR CUSTOMERS.
